

**SWISS PRIME MEASURING SINCE 1957** 

3-Axis Laser Measurement. The Solution for Accurate Diameter and Ovality Measurement.

# **ODAC® 63TRIO**

#### **Diameter Scanner and Flaw Detector in One Unit**

ZUMBACH, pioneer of on-line measurement and its triple-axis ODAC TRIO laser diameter gauges belong to the market leaders of super fast diameter measuring devices. 3 synchronized measurement axis in 1 single plane provide comprehensive measurement coverage, peak-precision diameter and ovality measurement as well as precise and super-fast flaw detection capabilities. Such combinations will help to reduce system costs due to the combination of diameter measurement and flaw detection into one single measuring device. Thanks to the compact design, the ODAC<sup>®</sup> 63TRIO measuring heads can be used in virtually every manufacturing process in the wire and cable industry, the plastics and rubber industry as well as the steel and metal industry. Known for precision, guality and ease of use the laser measuring heads from ZUMBACH are among the best of their class. The technological basis considered for these measuring heads is always of the latest cutting edge technology, with laser diodes as light sources combined with intelligent and powerful measured-value processors which facilitate a simple and flexible integration. Our long-standing experience as a pioneer of in-line measuring technology, combined with high production figures result in a product with an excellent price-performance ratio.

Amongst the outstanding features are features such as single scan calibration (CSS), single scan monitoring and high data rate output of up to 200\* data packages per second.

The measuring heads can be used with all line speeds. Vibrations during production have no noticeable influence on measurements.

### Adaptive signal processing in the measuring units increase accuracy

All the measuring heads of the ODAC<sup>®</sup> series have adaptive signal processing (patent DE3111356), which makes subsequent regular re-calibrations superfluous. Only in instances of component exchange or compliance to calibration regulations ISO 9001 etc. would re-calibration be required. All the relevant parameters for accuracy are continuously monitored by the measuring system and automatically compensated. This is valid in particular also for possible long-term changes of the behaviour of the scanner motor or the measuring electronics.

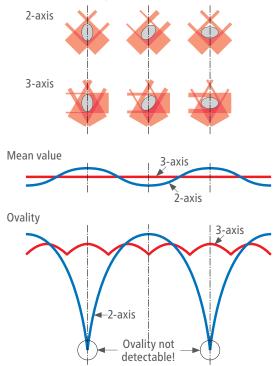

\* Depending on the measuring head model, the number of transmitted measured values as well as the baud rate of the interface.

#### **Main Advantages**

- 9000 measurements per second (FF version)
- 3 synchronized measurement axes on 1 single plane
- Single scan monitoring up to 9000 scans/second
- Reliable detection of the ovality
- Detects any deviation from roundness of oval and out-of-round with polygonal shape (multi-lobe)
- Yields highly accurate mean value, regardless of the orientation of the product ovality
- Computes accurate values of circumference and cross section (important for fittings of tubes and hoses)
- Increased measurement accuracy and reliability
- High dirt and dust tolerance

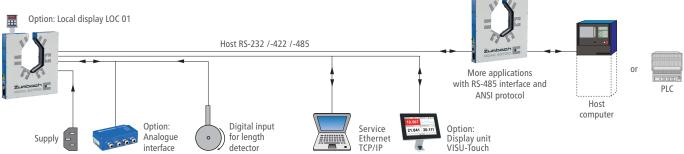

#### Comparison of 3- and 2-axis measurement: Orientation of the object

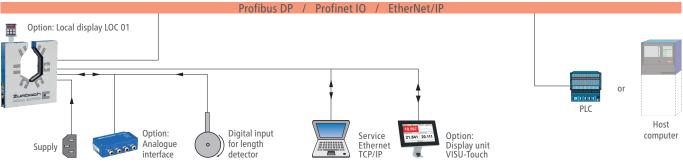

#### System Overviews

#### **ODAC® 63TRIO-EN-RS (serial interface)**

The built-in processor allows the acquisition and monitoring of the measured values, as well as statistic functions, parameter selection and many other functions. The RS version communicates via the integrated RS interface with a higher level system, like USYS from Zumbach, Host computer (or PLC). The Zumbach protocols ODAC or Host are selectable according to choice. The service interface (Ethernet TCP/IP) is used for configuring the measuring system.

#### ODAC® 63TRIO-EN-DP (Profibus DP), -EN-PN (Profinet IO) or -EN-EI (EtherNet/IP)

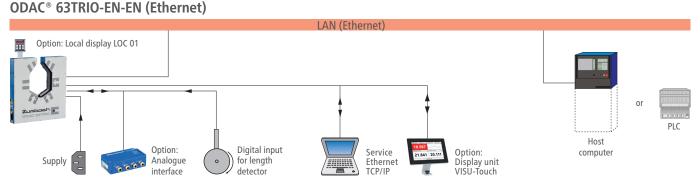

The built-in processor allows the acquisition and monitoring of the measured values, as well as statistic functions, parameter selection and many other functions. These versions communicate via the integrated Profibus DP, Profinet IO or EtherNet/IP interface with a higher level system. These interfaces are designed for high speed data transfer at the sensor actuator level. At this level, controllers such as programmable logic controllers (or PLC's) exchange data via a fast serial (Profibus DP) or Ethernet (Profinet IO) connection with their distributed peripherals such as drivers, valves or intelligent slaves like ODAC measuring heads from Zumbach.

parameters are integrated and transferred using a selectable Zumbach

protocol (ODAC or Host protocol) in standardized packages of the TCP/IP.

TCP/IP allows the data transfer through existing networks such as

The built-in processor allows the acquisition and monitoring of the measured values, as well as statistic functions, parameter selection and many other functions. The EN version communicates via the integrated EN interface with a higher level system. The measured values and

#### Description

Description	Order Number	
Floor stand ST2-ODAC 63TRIO Vertically adjustable.	ST02.103.75750	
Line height (H): 9001200mm (35.4347.25in.)	H	
Swivel floor stand ST2-ODAC 63TRIO	ST06.150.63000	

Swivel floor stand ST2-ODAC 63TRIO Vertically adjustable.

Line height (H): 860...1150 mm (33.86...45.28 in.) Swivel angle: 90° (upward)

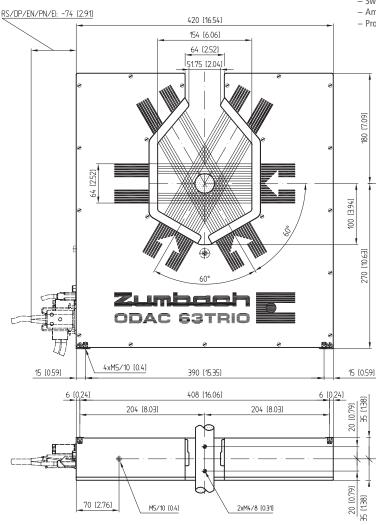

Mountable support for ST2 Lateral support, including rotary holder (USY.0002.910) for table top version of the USYS 20 processor.

ST02.060.190

Limiting socket VF63-ODAC63 The ceramic limiting socket is only a device to delimit the measuring field. It has no guiding function.

### **Dimensions**

#### Set of calibration standards

Delivered in a protection box, comprising:

- Calibration standard holder
- Calibration standard ø2 and 50 mm - Certificate, other calibration standards on request.

#### Local display LOC 01

Is mounted directly on the measuring head. Requires connection cable # ODAC.9167.00004 between LOC 01 and the measuring head. Not for ODAC J versions.

VISU.001.01XXX

A15 608 8XXX

ODAC.9500.89000

#### VISU-Touch

The VISU-Touch is a rugged and compact 7" touch screen. This universal PoE (Power over Ethernet) powered touch screen enables display of the integrated web interface of the connected measuring head. It is supplied with a holder for fixing on the measuring head. Not for ODAC J versions.

#### Ethernet cable

Ethernet network cable cat. 6 S/FTP with RJ45 connectors.

(XXX in the order number stands for: x 0.1 m, e.g. A15 608 8025 stands for 25 x 0.1 m and thus a cable that is 2.5 m long). Not for ODAC J versions.

Interface with 4 analogue, 5 digital and 2 relay outputs.         Direct connection of the digital input (proximity switch).         Not for ODAC J versions.         Signal cable L2 Bus 1DR22 x 02R         For the connection between the Profibus DP interface and the customer's data acquisition system. Only for DP version.         Connector         Counter connector for digital input "I/F". Connection of a proximity switch. It is not required, if the analogue interface is already used.         Not for ODAC J versions.	N2.7860.1000
Analogue interface Al4-R       ODAC.0         Interface with 4 analogue, 5 digital and 2 relay outputs.       ODAC.0         Direct connection of the digital input (proximity switch).       Signal cable L2 Bus 1DR22 x 02R         Not for ODAC J versions.       A13 25         For the connection between the Profibus DP interface and the customer's data acquisition system. Only for DP version.       A10 12         Connector       A10 12         Gounter connector for digital input "I/F". Connection of a proximity switch. It is not required, if the analogue interface is already used.       A10 12         Not for ODAC J versions.       Image: Alternative	
Interface with 4 analogue, 5 digital and 2 relay outputs. Direct connection of the digital input (proximity switch). Not for ODAC J versions. Signal cable L2 Bus 1DR22 x 02R For the connection between the Profibus DP interface and the customer's data acquisition system. Only for DP version. Connector Counter connector for digital input "I/F". Connection of a proximity switch. It is not required, if the analogue interface is already used. Not for ODAC J versions.	
For the connection between the Profibus DP interface and the customer's data acquisition system. Only for DP version.  Connector Counter connector for digital input "I/F". Connection of a proximity switch. It is not required, if the analogue interface is already used. Not for ODAC J versions.	
Counter connector for digital input "I/F". Connection of a proximity switch. It is not required, if the analogue interface is already used. Not for ODAC J versions.	ofibus DP interface and
switch. It is not required, if the analogue interface is already used.	A10 125 0070
Proximity switch A16 10	
The provimity switch is used for the length detection	A16 100 0110

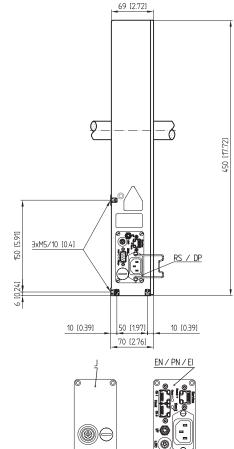

The proximity switch is used for the length detection. Main data:

- Standard: EN 60947-5-6 (NAMUR, NC)

- Switching distance max. 2 mm (.08 in.), flush mounting

Ambient temperature: -25...100°C (-13...212°F)

- Protection: IP 67, Connection: PVC cable 2 m (6.5 ft.)

<ul> <li><sup>1)</sup> M stands for measuring field height. In practice, the largest object diameter corresponds to Measuring Field Height minus instability of position.</li> <li>• Technical specifications are subject to change without notice</li> </ul>									
<sup>2)</sup> System resolution is the smallest practical value on the last digit of the display.									
<sup>3)</sup> Measured in the measuring plane, in	cl. lateral Jitter of the sca	ns.							
<sup>4)</sup> Maximum power of the laser can be	read on the warning labe	l ! 🍡							
<sup>50</sup> The xxN-F versions (Narrow beam) is recommended in case of products with very uneven surfaces, for the contour measurement and detection of surface defects, such as lumps and neckdowns.									
<sup>6</sup> Conformity not verified by UL.									
Ordering Information       LASER RADUCT         When ordering, please specify the following:       LASER RADUCT         Measuring head models: ODAC 63TRIO-EN-RS/-DP/-EN/-PN/-EI, ODAC 63TRIO-J       LASER RADUCT									
i wiedsuring neau mouels. ODAC 05TRIO-EN-R5/-DF/-EN/-FN/-EI, ODAC 05TRIO-J									

- 2 Connection cable
- 2a The connection between ODAC 63TRIO-EN-RS and the higher level system is to be provided by the customer (via serial interface).
- 2b For the ODAC 63TRIO-EN-DP versions, the connection to a higher level system is made with the signal cable # A13 252 0150.
- 2c For the ODAC 63TRIO-EN-EN/-PN/-EI versions, the connection from the measuring head to the customer's Ethernet port, must be provided by the customer.
- 2d Length of the connection cable between ODAC 63TRIO-J and the processor. Available lengths: 1, 2, 5, 10, 15, 20, 25 and 30 m (3.3, 6.6, 16.4, 32.8, 49.2, 65.6, 82 and 98.5 ft.); Longer cables on request.
- **3 Processor model** (Data acquisition system), only for **ODAC 63TRIO-J**: USYS 20, USYS 200, USYS IPC 1e, USYS IPC 2e, CI 1J/EN-RS, CI 1J/EN-DP, CI 1J/EN-PN, CI 1J/EN-PI. CI 1J/EN-EI. Please ask for corresponding data sheets.
